## IN THE CLAIMS

1 (Currently Amended). A neutron shielding material composition comprising:

a hydrogenated bisphenol resin;

a refractory material having higher density than that of the hydrogenated bisphenol resin;

a density-increasing agent having higher density than that of the refractory material;

a curing agent component; and

a boron compound,

wherein said neutron shielding material composition maintains the density of a base resin comprising said curing agent component and the refractory material[[.]]; and wherein density of the neutron shielding material composition is from 1.62 g/cm<sup>3</sup> to 1.72 g/cm<sup>3</sup>.

2 (Previously Presented). A neutron shielding material composition comprising a hydrogenated bisphenol epoxy represented by the following structural formula (1):

wherein each of  $R_1$  to  $R_4$  is independently selected from the group consisting of  $CH_3$ , H, F, Cl and Br, and n is from 0 to 2;

a refractory material having higher density than that of the hydrogenated bisphenol resin;

a curing agent component having at least one ring structure and a plurality of amino groups;

a density-increasing agent having higher density than that of the refractory material; and

a boron compound,

wherein said neutron shielding material composition maintains the density of a base resin comprising said curing agent component and the refractory material.

3 (Previously Presented). The neutron shielding material composition according to claim 1, further comprising one or more compounds selected from the group consisting of a compound represented by the structural formulas (2), (3), (6) and (9):

$$R_{5}-0 \longrightarrow H$$

$$(2)$$

wherein R<sub>5</sub> is a C1-10 alkyl group or H, and n is from 1 to 24;

$$0 \longrightarrow (CH_2)_{\overline{n}} 0 - C \longrightarrow 0$$
(3)

wherein n is from 1 to 8;

wherein each of R<sub>9</sub> to R<sub>12</sub> is independently selected from the group consisting of CH<sub>3</sub>, H, F, Cl and Br, and n is from 0 to 2; and

$$0 \longrightarrow CH_2 - 0 \longrightarrow CH \longrightarrow 0$$
 (9)

4 (Previously Presented). The neutron shielding material composition according to claim 1, comprising, as the curing agent component, a compound represented by the structural formula (4):

$$H_2N \longrightarrow CH_2 \longrightarrow NH_2$$
 (4)

5 (Previously Presented). The neutron shielding material composition according to claim 1, wherein the curing agent component comprises one or more of compounds represented by the structural formulas (5) and (8):

$$\begin{array}{ccccc}
H_2N - CH_2 & CH_2 - NH_2 \\
CH & = CR_8 \\
R_6 - N & N & (8)
\end{array}$$

wherein R<sub>6</sub>, R<sub>7</sub> and R<sub>8</sub> each is independently a C1-18 alkyl group or H.

6 (Previously Presented). The neutron shielding material composition according to claim 1, further comprising a filler.

Claim 7 (Canceled).

8 (Previously Presented). The neutron shielding material composition according to claim 1, wherein the refractory material comprises at least one of magnesium hydroxide and aluminum hydroxide.

9 (Previously Presented). The neutron shielding material composition according to claim 1 or claim 2, wherein the density-increasing agent is a metal powder having a density of 5.0 to 22.5 g/cm<sup>3</sup>, a metal oxide powder having a density of 5.0 to 22.5 g/cm<sup>3</sup>, or a combination thereof.

10 (Previously Presented). A neutron shielding material obtainable from the neutron shielding material composition according to claim 1 or claim 2.

11 (Previously Presented). A neutron shielding container obtainable from the neutron shielding material composition according to claim 1 or claim 2.

Claim 12 (Canceled).

13 (Previously Presented). The neutron shielding material composition according to claim 8, wherein said magnesium hydroxide is obtained from sea water magnesium.
